

ABSTRACT

1
2 A safety enclosure for a powered reel apparatus for use
3 with an associated elongated flexible member. The reel is
4 carried by and enclosed within the enclosure and is rotatable
5 by a electric motor. The enclosure has left and right wall
6 panels, front and rear wall panels extending between the left
7 and right wall panels, and a cover. When one of the panels
8 is in an open position, the motor is operationally locked
9 out, and when one of the panels is rotated into a closed
10 position, the motor is operable.
